DETAILED ACTION

1. Receipt of applicants' amendments and remarks submitted March 11, 2003 is acknowledged. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. A new ground rejection is follow.

Claim Rejections 35 U.S.C. 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ducharme et al. (WO 96/11676, IDS) in view of Talley et al. (WO95/15316).

3. Ducharme et al. teach a method for treatment of neurodegenerative disease Alzheimer disease by administering selective COX-II inhibitors to patient in need. COX -II inhibitors in general are known to have anti-neurodegenerative effect, and are useful for treating neurodegenerative disease. Ducharme et al. further teach that benzenesulfonamide derivatives are known to be useful as selective COX-II inhibitors. See particularly, page 2.

4. Ducharme et al. do not teach expressly the employment of pyrazol-1-yl benzenesulfonamide compounds herein as the COX-II inhibitors.

5. However, Tally teaches that the compounds employed herein are known selective COX-II inhibitors. See, particularly, page 8, and the claims.

Art Unit: 1617

Therefore, it would have been prima facie obvious to a person of ordinary skill in the art, at the time the claimed the invention was made, to employ the compounds herein as COX-II inhibitors in Ducharme's method.

A person of ordinary skill in the art would have been motivated to employ the compounds herein as COX-II inhibitors in Ducharme's method because the compounds herein are known to have high selectivity of inhibiting COX-II (not COX-I), which is preferred in Ducharme's method.
